SECURITY ASSESSMENT

WATCH**HUNT**DEFEAT

SECURITY ASSESSMENT PROCESS

Social engineering/ spear phishing programs	Open-source intelligence gathering	Vulnerability scanning and assessments	Penetration testing	Web application testing	Physical & wireless jacking	Red, blue and purple teaming programs

---

Vulnerability assessments

Identifying and assessing vulnerabilities in your hardware, software, and network infrastructure.

Penetration testing

Simulating a cyber-attack to test the security of your systems and identify vulnerabilities.

Red teaming

Simulating a real-world cyber-attack on your systems to identify vulnerabilities and weaknesses in your security posture.

Web application security testing

Testing the security of your web applications to identify potential vulnerabilities and prevent cyber-attacks. .

Wireless security testing

Testing the security of your wireless networks and devices to identify potential vulnerabilities and prevent unauthorized access.

Social engineering testing

Testing the security of your employees by attempting to trick them into revealing sensitive information or performing unauthorized actions.

Risk assessments

Identifying and assessing potential cybersecurity risks to your operations and assets.

Compliance assessments

Evaluating your compliance with relevant cybersecurity regulations and standards, such as HIPAA, PCI-DSS, or ISO 27001.
